DETAILED ACTION

Reasons for Allowance

Claims 1 and 7 are allowed. Applicant discloses an optical coupling element and a method of making the same. U.S. Patent 6,141,465 to Bischel et al. teaches, in reference to Fig. 3, a substrate 60 with a waveguide core 64 formed therein, a poled structure 62 of two types of domains 66/68 that is modulated to create a grating. However, Bischel lacks an optical cladding formed in the substrate and independent of the optical guide core in a zone of interaction; Bischel also lacks forming a coupling grating between the optical guide core and the optical cladding. Applicant's claim has several features that distinguish from common modulated gratings by relevant prior art. Firstly, the optical core and cladding are formed *in* a substrate as opposed to *on* a substrate epitaxially by most prior art; secondly, the optical cladding formed is independent of the core; finally, the cladding is modulated in the zone of interaction to form the coupling grating whereas prior art commonly modulate the core to create a grating. The combination of these limitations is not taught or suggested by relevant prior art, and it is the examiner's position that the prior art of record, taken alone or in combination, fails to disclose or render obvious the combination of the three limitations stated, in combination with the rest of the limitations of the base claim.

Claims 2-8 and 8-18 are allowed as dependent claims of allowed claims 1 and 7.
